

COMPANY PROFILE

Soil Stabilization Native Slurry Backfill Stabilization Engineering Pneumatic Transportation Material Handling and Storage

Soil Stabilization Solutions

In today's competitive business environment it has become increasingly vital for engineering firms and construction companies to provide clients with all the design and construction options available. The soil stabilization alternative has become a vital element in providing real value engineering and constructability solutions.

These solutions are provided based on our extensive experience, specialized equipment, and our soil reagents. Due to the escalating cost of other construction materials such as baserock, asphalt and concrete, the ability to effectively recycle the existing soil into a product that would have been imported has become one of the most cost-effective approaches to many civil projects. From baserock replacement to flowable backfill, the use of the existing soils is not just "green", it is much more economical, especially when compared to exporting this existing resource.

Griffin Soil Group provides the latest engineering techniques and the most effective soil reagents in the stabilization industry. The Group operates the largest and most complete fleet of stabilization equipment in the United States. Our engineering experience in soil stabilization techniques ensure a variety of economic choices that translate to a competitive advantage for our clients.

Griffin Soil Group prides itself on quality control, schedule, and cost control on all our projects. Let us provide you with our unique experience to benefit your next civil project. We offer complete engineering, construction and technical support throughout the design and construction phases.

Footing Extenders

Native Slurry Backfill

Stabilization Services

- Site winterization and dry-up
- Soil treatment of unstable soils
- Hazardous material mitigation
- Sludge drying bed stabilization
- Landscape spreading and mixing
- Deep treatment for foundation support
- Soil mixing
- Pond & water retention liners

Pavement Section Services

- Soil stabilization structural enhancement
- Cement Treated Base (CTB)
- Full-Depth Recycling (FDR)
- Lime Treated Subbase (LTS)
- Asphalt pulverization & reclamation

Native Slurry Backfill - NSB

- Utility trench backfill
- Building pad footing extensions
- Mobile or stationary plugmill plant mixing
- CLSM replacement

Other Services

- Soil stabilization Engineering
- Cost Reduction Incentive Proposals
- Pneumatic trucking
- Bulk materials handling & storage
- Silo & guppy storage solutions
